

## The Latest EHR Rules and Guidelines

The government is working on changing the health industry into the digital age and has provided reimbursement incentives and an electronic medical records deadline for those who adopt [electronic medical records \(EMR\)](#). However, along with the benefits from the government there are also penalties for those who do not meet the electronic medical records deadline for implementation.

### Deadline penalties

For health care practices who either have not adopted certified **EHR / EMR systems** or cannot demonstrate "meaningful use" by the EMR deadline in 2015, Medicare reimbursements will be reduced by 1%. The deduction rate increases in succeeding years by 2% in 2016, 3% in 2017, 4% in 2018, and up to 95% depending on future adjustments.

### "Meaningful use"

On the other hand, as part of the American Recovery and Reinvestment Act, health care providers can receive up to \$44,000 reimbursement incentive payments which started in 2011 for implementing EMR systems. Health care providers must be able to demonstrate "meaningful use." The "meaningful use" standard is measured in stages. Stage 1 started in 2011 and ended in 2012. It required that providers meet 14 to 15 core requirements and choose five more from a menu of 10 options. Some of these requirements include electronic file system for all patients' health records, medical billing system, and transcription services. Physicians will have until end of 2014 to meet Stage 2. Stage 3 has yet to be defined. [Check out this "Meaningful Use" calculator to see how much time you have to comply.](#)

#### Benefits of "meaningful use"

- Complete and accurate information. With electronic health records, providers have the information they need to provide the best possible care. Providers will know more about their patients and their health history before they walk into the examination room.
- Better access to information. Electronic health records facilitate greater access to the information providers need to diagnose health problems earlier and improve the health outcomes of their patients. Electronic health records also allow information to be shared more
