

# Backup Solutions

It is absolutely essential that your company regularly backup important data. You must also make sure that those backups are safe and able to be recovered in the event of an emergency. At CATS, we are experts on all forms of backup and disaster recovery services and we can ensure that all of your company's critical data is protected, safely stored, and easily recoverable. We can also provide you with email archiving services to preserve your valuable company information, while at the same time aiding in regulatory compliance, e-Discovery, and legal readiness. When you partner with us, we will evaluate your company's needs to provide you with the right solution, then implement and maintain it so you never have to worry about losing vital data.

## **Traditional Backups:**

Our traditional approach combines the use of external or internal tape drives with advanced backup software to create exact snapshots of the server system, allowing a complete system restore directly from the backup media. These tapes can give you days, months, or years of data retention, depending on your needs.

## **Online Backups:**

Another backup option, which is often more affordable for small to medium-sized businesses, is online backups. We provide you with simple, scalable, secure and affordable online backup and recovery of data stored on desktops, laptops, and Windows servers. Once backed up, your data is secure at data centers with 24x7x365 onsite monitoring and security and state-of-the-art protection against disaster.

## **Email Archiving:**

We make it both easy and convenient to help you locate specific email messages when you need them, help you better cope with the growing volume of emails, and gain control over your email management storage costs while ensuring compliance and increasing performance and efficiency.

**When you choose CATS to provide backup solutions for your company, it will give you immediate peace of mind. Here are a few other benefits:**

### **Online Backups Give You Maximum Protection for Minimum Cost**

A complete disaster recovery package can be very expensive. However, now you can have the same protection at a much lower cost, with online backups. Your data will be consistently backed up, then stored in a secure offsite location so that it is safe and recoverable, no matter what happens to your computer network or your office.

### **Archiving Email Protects You and Your Company**

In the event of a lawsuit or regulatory compliance question, archiving allows you to easily pull up any pertinent emails. They can also provide invaluable information on projects if a key employee leaves suddenly.

### **Backing Up Documents Will Save You Time and Money**

Regular backups give you the ability to restore files quickly and easily, ensuring that you and your employees never waste valuable time recreating work again.
